SYNTHETIC INDUSTRIAL TURBINE OILS

SYNTHETIC INDUSTRIAL TURBINE OILS

When conventional turbine oils aren't meeting the demands of severe service operation, synthetics pick up the slack with outstanding thermal stability and enhanced protection against corrosion and deposit formation. Synthetic Industrial Turbine Oils provide long service life and help keep equipment clean and cool to reduce overall maintenance costs, extend equipment life and lower utility costs.

Use this guide to find the Synthetic Industrial Turbine Oil that best suits your needs.

SYNCON® TURBINE OIL

Premium Quality Synthetic PAO-Based Turbine Oil

Syncon® Turbine Oil is formulated with synthetic base oils and blended with carefully balanced additives to provide outstanding oxidation resistance and thermal stability at high temperatures for optimum deposit control and long service life. Developed for use in land-based gas turbines operating over a wide range of temperatures, Syncon® Turbine Oil provides high load carrying capacity and protection against wear, corrosion and foaming.

APPLICATIONS

- Land-based gas turbines where the manufacturer calls for a synthetic hydrocarbon or PAO-based turbine oil
- Approved by Solar Turbine for ES9-224 Lube Oil Specification for Class 1, ISO 32 turbine oils

FEATURES/BENEFITS

- Excellent low-temperature fluidity
- Low volatility for less oil make up
- Very low pour point, high viscosity index
- Excellent thermal and oxidative stability
- Protects against rust and corrosion

SYNDUSTRIAL® TURBINE OIL

Synthetic Polyol ester Lubricant for Land-Based Industrial and Marine Gas Turbines

Syndustrial® Turbine Oil is a premium quality synthetic lubricant developed for the severe service requirements of aero-derivative stationary and marine gas turbines.

Aero-derivative stationary gas turbines place considerable stress on the oil, often necessitating the use of synthetics. Syndustrial® Turbine Oil is formulated with synthetic base oils and blended with select ashless additives to provide outstanding lubricating qualities, high affinity for metal surfaces to protect against wear and excellent detergency for improved cleanliness.

APPLICATIONS

- Aero-derivative stationary and marine gas turbines

FEATURES/BENEFITS

- Outstanding oxidation resistance and thermal stability
- Excellent low-temperature fluidity
- Protects against rust and corrosion
- High load-carrying capacity
- Natural detergency
- High flash point for reduced fire/explosion hazard

Experience the difference with Synthetic Industrial Turbine Oils. For effective day-in, day-out performance, Synthetic Industrial Turbine Oils are manufactured only from the highest quality components, and blended with performance-enhancing additives for reduced maintenance and downtime. Recommend ConocoPhillips and both you and your customers will benefit.
